

Dee X-Change Public Whitepaper

Draft Version - June 2026

Table of Contents

Executive Summary, Introduction, Problem Statement, Solution Overview, System Architecture, Liquidity Model, Borrowing Lifecycle, Risk Management, Roadmap, Conclusion

Executive Summary

Dee X-Change is a Smart Hybrid Finance Protocol combining a CeFi utility layer and a DeFi peer-to-peer lending marketplace.

Introduction

Dee X-Change bridges stablecoin utility with decentralized lending infrastructure.

Problem Statement

Stablecoin users face utility, liquidity, and lending accessibility challenges.

Solution Overview

A unified ecosystem combining stablecoin utility services and collateral-backed lending.

System Architecture

Includes User Layer, CeFi Layer, Identity Layer, Wallet Association Layer, DeFi Layer, Smart Contracts, Risk Management, and Security Layer.

Liquidity Model

Founder bootstrap liquidity, open lender participation, dynamic interest rates, and isolated loan structures.

Borrowing Lifecycle

KYC, wallet connection, collateral deposit, loan execution, repayment, liquidation, and closure.

Risk Management

Over-collateralization, LTV controls, risk buffers, continuous monitoring, liquidation mechanisms, and smart contract enforcement.

Roadmap

Phase 1 Crowdfunding, Phase 2 Community Growth, Phase 3 Utility Layer Launch, Phase 4 KYC, Phase 5 Lending Protocol, Phase 6 Audit, Phase 7 Marketplace Launch.

Conclusion

Building a future where digital assets are useful, accessible, and practical for everyday financial activity.
